

Company Overview

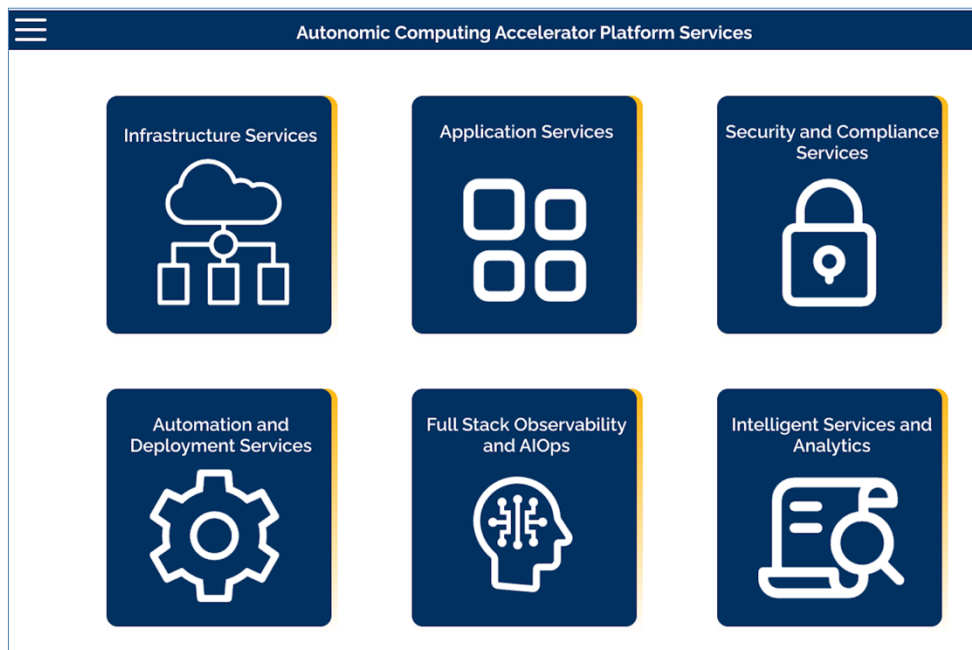

Autonomic Solutions LLC., is a Virginia SWaM certified small business providing mission-focused digital and cloud services to the US federal government. We are part of the *AWS Activate | Builders and Google Cloud for Startups* programs, bringing turnkey and innovative solutions for systems modernization and integration, cloud adoption, DevSecOps, data analytics, and AI/ML implementations for enterprises. Leveraging emerging architectures, and reusable engineering, we build interoperable, autonomic, and distributed intelligent systems and solutions for customers using cloud computing, automation, Open-source technologies and artificial intelligence (AI).

The principal and key SMEs of Autonomic Solutions bring over 20 years of technology and engineering leadership within the US Federal GovCon Industry. Our team has architected and led several systems modernization, cloud adoption and advanced analytics implementations for federal agencies like DOC (NOAA and Census), USDA, Treasury, DHS (FEMA, USCG and TSA), EPA, GSA and HHS.

Autonomic Computing Platform (ACP)

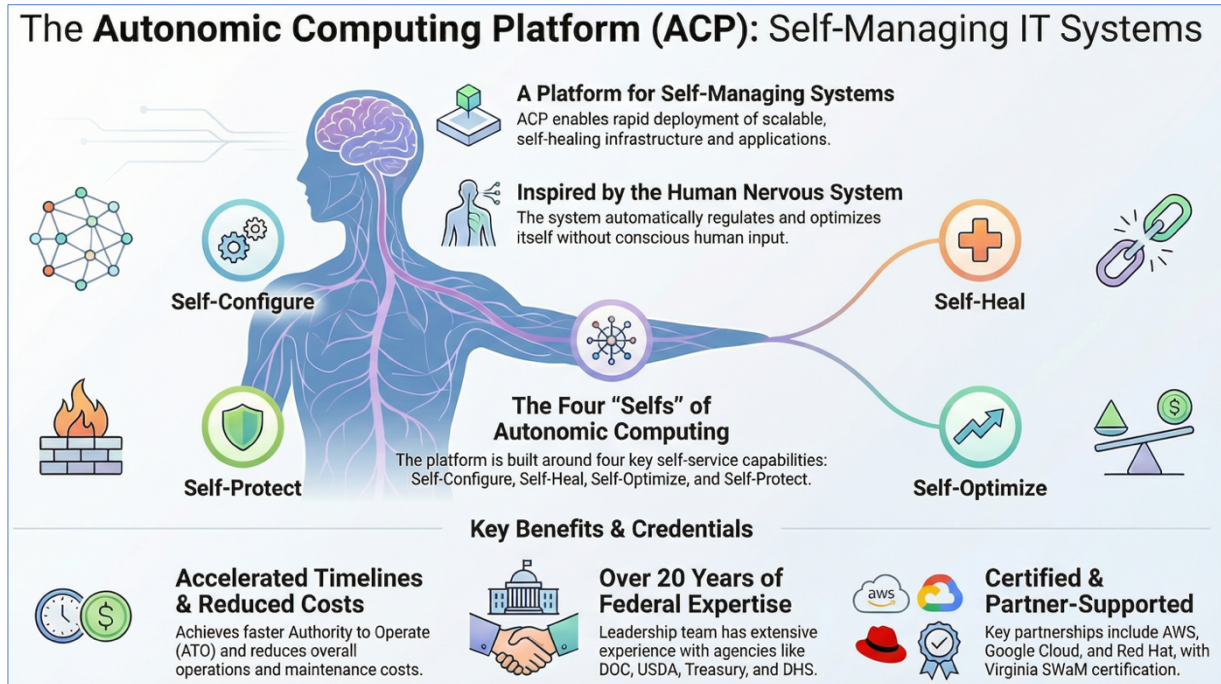

Patterned on the Human Nervous System. Engineered for Mission Solutions.

Our innovative and turnkey solution architecture paradigm, the **Autonomic Computing Platform (ACP)** enables rapid buildup, teardown and deployment of scalable and self-healing infrastructure, containerized applications and solutions across the multi and hybrid clouds; - in a repeatable and turnkey manner using Cloud, AI, and Automation.

The platform leverages a **plug-n-play** architecture, Infrastructure and Security as Code, Kubernetes, AIOps and Opensource technologies for high availability, resilience and, full-stack observability across distributed and hybrid cloud architectures.

The infrastructure and applications deployed using this platform are Interoperable, **Autonomic and Distributed Intelligent Systems** that continuously learn, evolve, and optimize automatically for increased efficiency through situational awareness and contextual adaptation. Thus, enabling **Autonomic Computing** through self-service features like **Self-Configure, Self-Heal, Self-Optimize and Self-Protect** the system.

The **self-managing computing model** is named after, and patterned on, the human body's autonomic nervous system that regulates body systems automatically, without conscious input from the individual.

The ACP includes the **MAPE-K Reference Model - Monitor (M), Analyze (A), Plan (P), Execute (E), Knowledge (K)**, a closed-loop control system that transforms cloud environments, applications and automation into self-manageable **Autonomic Systems**.

The benefits of this innovative computing model include **(1)** reusable architecture and code templates to build systems, **(2)** accelerated ATO (Authority to Operate) through automated compliance and self-manageable triggers, **(3)** highly calibrated levels of intelligence, security, and autonomy for the system, **(4)** the system re-engineers / reconfigures to the desired state under issues or attack, **(5)** overall reduction in operations and maintenance costs, and **(6)** improvement in agility, security and resilience of systems.
